**ARCHITECTURAL AND ROOFING PRODUCTS**

**DOOR CANOPIES**

CAPVOND PLASTICS produce GRP canopies in a traditional style to highlight and enhance the appearance of both new build and refurbished properties. 3 styles are available: The Skye, The Lewis and The Arran.

**STYLE 1: The Skye**

A dual pitch canopy constructed in one piece for added strength and durability. The roof section is of GRP construction supported by timber leg brackets and barge board. The Skye canopy is fixed at 5 anchor points.

**STYLE 2: The Lewis**

Available in lengths from 2 m - 5 m the Lewis canopy is a single pitch canopy designed to extend over longer lengths to protect both windows and door openings. Supported by up to 5 timber leg brackets the Lewis comes complete with full length barge board ( if required) .

**STYLE 3: The Arran**

A single pitch canopy for over door use. Available in 1.2 m - 2 m lengths the Arran is supported by leg brackets with 4 anchor points.

In all cases tile type, roof finish, colour and angle can be alerted to suit (subject to suitable volume). Similarly, support frames can be manufactured to almost any design. Weather seal to the supporting wall is achieved by application of mastic/sealant. Additional decorative design can be achieved by use of flashing or GRP moulded flange. As manufacturers of all types of GRP components CAPVOND PLASTICS have the capability to produce any type of canopy to the customers' own specification and requirement.
